## Summary —

Full-stack Software Engineer focused on Laravel, React, Electron, and SaaS platforms. Experienced in building production-grade dashboards, time tracking systems, app builders, payment workflows, and scalable admin panels with clean architecture and performance-first development.

## Skills

**Frontend** React, Next.js, Redux, Tailwind CSS, Bootstrap

**Backend** Laravel, PHP, CodeIgniter, Node.js

**Database** MySQL, MongoDB, SQLite

**DevOps** Ubuntu, AlmaLinux, cPanel, WHM, Git, SVN

**Languages** JavaScript, TypeScript, PHP, Python, Bash

## Experience

### ITDEALBD

May 2022 – Nov 2022

*Full-stack Software Developer*

- Built and maintained React.js UI components for web applications
- Fixed UI and integration issues in Laravel-based systems
- Collaborated with team to debug and resolve production bugs
- Optimized frontend performance and responsiveness

### THESOFTKING LIMITED

November 2023 – Present

*Full-stack Software Engineer*

- Built and maintained Laravel-based SaaS modules, dashboards, and APIs
- Developed frontend systems using React, Next.js, and Redux
- Debugged complex production issues across tracking, payments, and reporting systems
- Improved performance through query optimization, caching, and frontend cleanup
- Worked on Linux-based deployments, server setup, and debugging
- Built and maintained commercial CodeCanyon products

## Education

### Uttara University

*Computer Science Engineering*

*Running*

## Projects

### BuildEcom.app (Live)

- Built a no-code mobile app builder for WooCommerce stores
- Generated AAB/APK files from dynamic Flutter source builds
- Developed WordPress plugin for seamless WooCommerce integration
- Enabled users to convert stores into production-ready mobile apps

### TimoDesk (Live)

- Built a SaaS time tracking platform with desktop tracking, screenshots, activity monitoring, and idle detection
- Developed Laravel backend modules for projects, teams, reports, timesheets, and productivity analytics
- Implemented offline tracking sync and reliable session handling
- Worked on Electron desktop app stability, memory optimization, and tracking accuracy
- Improved real-time data sync and reduced tracking inconsistencies in production

### Custom PHP Framework (GitHub)

- Built a lightweight custom PHP framework with MVC architecture
- Developed routing, middleware, request handling, and database abstraction
- Designed reusable components for rapid application development
- Focused on performance and core framework-level understanding
